Moplen HP561S

Polypropylene, Homopolymer

Product Description

Moplen HP561S is a polypropylene homopolymer used for extrusion applications. *Moplen* HP561S has a very narrow molecular weight distribution and is formulated with an anti-gasfading stabilisation package. *Moplen* HP561S is used for the production of continuous filaments. Typical applications are partially-oriented yarns (POY) and spunbond nonwovens.

Regulatory Status

For regulatory compliance information, see *Moplen* HP561S Product Stewardship Bulletin (PSB) and Safety Data Sheet (SDS).

This grade is not intended for medical and pharmaceutical applications.

Notes

These are typical property values not to be construed as specification limits.

Conveying:
Conveying equipment should be designed to prevent production and accumulation of fines and dust particles that are contained in polymer resins. These particles can under certain conditions pose an explosion hazard. Conveying systems should be grounded, equipped with adequate filters and regularly inspected for leaks.

Storage:
The resin is packed in 25 kg bags, octabins or bulk containers protecting it from contamination. If it is stored under certain conditions, i. e. if there are large fluctuations in ambient temperature and the atmospheric humidity is high, moisture may condense inside the packaging. Under these circumstances, it is recommended to dry the resin before use. Unfavorable storage conditions may also intensify the resin's slight characteristic odor.

Resin should be protected from direct sunlight, temperatures above 40°C and high atmospheric humidity during storage. Higher storage temperatures may reduce the storage time.
